

Improving the uptake of Learning Disability Annual Health Checks in Leeds

As part of work to improve the health of people with learning disability in Leeds, a two year CQUIN, commencing July 2014, has been agreed between the Leeds CCG's and Leeds and York Partnership Foundation Trust's Learning Disability Service. Three community learning disability nurses have been seconded for 2 days a week to support the Learning Disability Enhanced Services (ES) in general practice.

We aim to work in line with the Learning Disability Enhanced Service guidance. We will look at the existing learning disability register and offer support to identify all people eligible for a health check, ensuring that the register is as comprehensive as possible.

We will look at the current process for offering health checks and health action plans. We will gather information about the numbers of health checks and health action plans offered and the health needs identified during the checks.

We will look at the barriers to health care and ways to improve the health check process. And make reasonable adjustments to improve access to health care such as easy-read letters or longer appointment times.

get
checked
out

We can provide information and resources to develop easy-read invite letters and health action plans. Promote the use of the Get Checked Out Check List that will provide important health information to support the health check.

We will be involved in delivering learning disability specific training to practices who have signed up for the ES.
